

Storing keys in MYKEYS Safe

*It is important to make sure the Futura key machine is tethered to both an external internet connection and to the Wi-Fi of the Futura itself in order for MYKEYS Safe to work properly with the Futura.

**For automotive keys you MUST decode and store the mechanical cuts with the Futura first. Then clone and store the transponder information in order for the process to work correctly.

Storing residential/commercial keys using the Futura and MYKEYS Safe

- Choose “Copy Key” and then “Copy by Original” to decode the cuts from the customer’s key.
- Follow the step-by-step instructions on placing the key into the proper jaw side and stop position and choose “Read.”
- Once decoded, choose the option “Send to MYKEYS Safe.”
- At this point you will be instructed to enter secure code. This code must come from the customer and their MYKEYS Safe app. Enter the code and choose “Forward.”
- Enter any relevant key information and then choose “Forward” again and the key will be stored in the MYKEYS Safe secure cloud database and also on the keychain within the customer’s MYKEYS Safe app.

Storing Automotive keys using the Futura and MYKEYS Safe

- Choose “Copy Vehicle Keys” to decode the cuts from the customer’s key.
- Enter Make, Model, and Year information for the customer’s vehicle.
- Select the proper key blank from the options provided on the Futura and choose “Read.”
- Follow the step-by-step instructions on placing the key into the proper jaw side and stop position and choose “Start.”
- Once decoded, choose the option “Send to MYKEYS Safe.”
- At this point you will be instructed to enter secure code. This code must come from the customer and their MYKEYS Safe app. Enter the code and choose “Forward.”
- Enter any relevant key information and then choose “Forward” again and the key will be stored in the MYKEYS Safe secure cloud database and also on the keychain within the customer’s MYKEYS Safe app.

Storing Automotive keys transponder information using the RW4 Plus/M-Box and MyKeys Safe

*The M-Box and an active wi-fi connection are needed for this process.

- Choose “Copy” from the RW4 Plus main menu
- Insert the customer’s original key and choose “Read (Rd).”
- Complete the cloning process
- When asked if you want other copies choose “ESC” for No.
- When asked “Save with MYKEYS?” choose “Enter” for Yes.

- At this point you will be instructed to enter secure code. This code must come from the customer and their MYKEYS Safe app. Enter the code and choose “Forward.”
- Once the secure code is entered the transponder information for the customer’s key will be stored in the MYKEYS Safe secure cloud database.
